

## Colocation Overview/Comparison

Description	Shared Connection	Committed Connection	Burstable Connection	Dedicated Connection
	We offer 100Mbps shared connections. This connection is shared by other customers in the data center. A certain speed at all times can not be guaranteed. This solution is ideal for servers with standard connection requirements (e.g. hosting servers, application servers etc).	This committed bandwidth colocation allows you to take advantage of discounted bandwidth pricing. Since your bandwidth charges will not vary month to month, it will help you to budget your colocation services. We will put a hard threshold on your committed bandwidth so you do not get over your allotted rate.	Our burstable connections are ideal for business that need room for growth and/or have varying bandwidth needs. With a burstable connection we leave your bandwidth burstable. Your usage will be measured on a monthly basis and charged based on the 95th Percentile.	A dedicated connection is a dedicated connection to your server or rack. This line is only used by you and nobody else. We offer 1Mbps to 100Mbps dedicated lines. You will be able to achieve these connection speed and transfer unlimited amount of data per month.
